

## OMAS High Speed Multi-Slide Machines:

OMAS high speed Multi-Slide forming machines provide an additional option for high volume components which call for manufacturers to find increased productivity through product automation. High speed mechanical machines are available for products from 0.5mm – 10.00mm (.020" - .394") wire diameters. Applicable products could include automotive, electronics, and appliance products. Secondary operations such as pressing, punching, piercing, heading, chamfering, welding, and assembly can be integrated into these automated systems. Examples might include hangar hooks with flattening and heading at 300 parts per minute or bucket handles with assembled plastic sleeves at 70 parts per minute. These systems provide a complete solution.
